No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

Patent No. 6340576

GENERAL INFORMATION:
APPLICANT: BERTIN, John
TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED
FILE REFRENCE: 07334-07601

CURRENT APPLICATION NUMBER: US/09/099,041A

CURRENT FILING DATE: 1998-06-17

PRIOR FILING DATE: 1998-02-06
                                            US-09-771-161A-93 (1-232) x US-09-023-655-684 (1-1060)

S Equence 3, Application US/09245281

Patent No. 6369196

GENERAL INFORMATION:

APPLICANT: Bertin, John

TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED PROTEIN FAMILY

TITLE OF INVENTION: NOWEL MOJEST THEREOF

FILE REFERENCE: 07334/118001

CURRENT APPLICATION UNDHER: US/09/245, 281

CURRENT FILING DATE: 1999-02-05

EARLIER APPLICATION NUMBER: US 09/207, 359

EARLIER PILING DATE: 1998-12-08

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                            /cloud ill EcoRI; /cloud ill EcoRI; /cloud ill EcoRI; /cloud ill EcoRI; /cloud ill EdoRI; Site_2: NotI; The poly (A) + RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intect mRNA was ligated with DNA-RNA linker including EcoR is site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The cDNA vector was adjusted to have about 60nt. The cDNA vector was circularized with B. coll DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The CDNA libraries constructed by this method are full-length enriched cDNA library."
